Foundation
of India**

*This network is initiated and managed by the **Cancer Foundation of India**
with support from the **American Cancer Society**.*

Cervical Cancer in India

A preventable cancer that still claims thousands of lives

Every 14.5 minutes
a woman in India
dies of cervical cancer

Cervical cancer is the
second-leading cause
of cancer deaths
among women

8 in 10 cervical cancers
in India are found late

64

million girls
are eligible for HPV
vaccination in India

79,360

new cases

est. 36,319

deaths annually

315

million women
are eligible for screening

1 in 83

Indian women will develop cervical cancer

Beat Cervical Cancer

Elevating Cancer Voices in India

The Cancer Foundation of India (CFI), with support from the American Cancer Society's Global Cancer Prevention Program, launched a network of civil society organizations in 2024. The network, named **Beat Cervical Cancer (BCC)**, is collectively taking action to advance the demand and coverage of cervical cancer prevention, starting with HPV vaccination, using science-based messages and interventions.

Vision:

BCC's vision is to unite non-governmental organizations (NGOs) in a collective effort to reach the common goal of witnessing India score a win against cervical cancer!

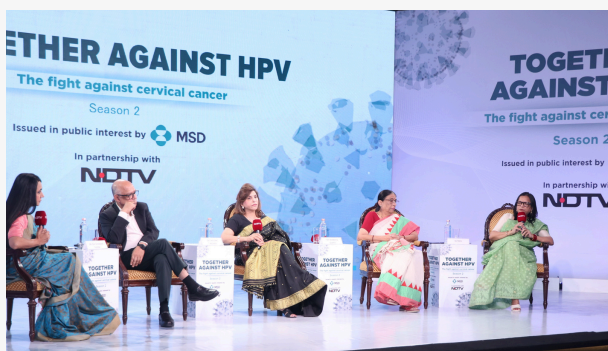

BCC aspires to engage NGOs across India to catalyze community action and advocate with state governments to prioritize cervical cancer prevention so that the next generation of Indian women grow up protected from cervical and other HPV-related cancers.
